PROPOSED RESIDENCE – 12 PROSECCO PLACE (LOT 14 DP1301590), MURRUMBATEMAN, NSW

On-Site Effluent Management Report

1 INTRODUCTION

At the request of the client, Fortify Geotech Pty. Ltd carried out an effluent disposal assessment to AS1547 “On-Site domestic wastewater management”, for proposed new dwelling at 12 Prosecco Place (Lot 14, DP1301590), in Murrumbateman, NSW.

The investigation site is currently vacant and planned for a development of residential property. The lot covers an area of 6500 m² and is mostly flat, sloping gently from the southwest to the northeast at an angle of 2 to 4 degrees. The ground surface is covered by some pasture grasses.

This Site and Soil Evaluation was conducted on 12 April 2024 in general accordance with AS 1547:2012 - “On-site domestic wastewater management”, “Designing and Installing On-Site Wastewater Systems: A WaterNSW Current Recommended Practice: 2019” and “The Environment & Protection Guidelines 1998 – On-Site Sewage Management for Single Households” (Silver Book).

The recommendations from the Land Capability Assessment Stage 3 – 13 August 2021 (V01) prepared for the sub-division by John Franklin of Franklin Consulting has been considered while preparing the report.

2 SITE INFORMATION

Address of site	12 Prosecco Place (Lot 14, DP1301590), Murrumbateman, NSW
Local government	Yass Valley Council
Investigation	A site and soil assessment were undertaken using the Australian Standard 1547, <i>On-site domestic wastewater management</i> , and the Environment and Health Protection Guidelines,

	<p><i>On-site sewage management for single households</i> (1998), Department of Urban Affairs and Planning, as guidelines. Suitable wastewater application systems, sizing and location for the site are recommended.</p> <p>The evaluation is based on a dwellings with five (4) potential bedrooms.</p>
Size	Approximately 6500 m ²
Location, shape, layout	A plan of the relevant areas of the site and proposed effluent application areas is described in Figures 1 and 2.
Photograph(s) attached	Yes (Figure 3 and 4)
Intended water supply	Rainwater for portable use (tank water supply)
Development	Proposed new primary residence
Expected wastewater flow:	<p>Number of bedrooms in main residence – 3</p> <p>Number of bedrooms in studio – 1</p> <p>Number of potential residents = (3+1)+(1+1) = 6</p> <p>Usage per resident = 120 L/day (as per AS1547)</p> <p>Design flowrate = 120 x 6 = 720 L/day (Consistent with the land capability assessment for the subdivision)</p>
Setting	This lot is in a rural setting where the average dwelling density is less than 1 dwelling per 0.6ha and therefore less than the 1 per 0.4 hectares required for groundwater protection (Geary & Gardner 1996, Land Management for Urban Development, Australian Society of Soil Sciences, Qld).
Current land-use	Vacant
Climate	<p>Summers are warm to hot, and winters are cold with little effective evaporation.</p> <p>Average rainfall in Murrumbateman area is ~726mm per year. The average monthly rainfall for summer is ~56mm and ~64mm for winter. Average monthly evapotranspiration for summer is ~175mm and ~42mm for winter (Based on rainfall data from weather station 070344 – Murrumbateman (McIntosh Circuit) and evaporation data from weather station 070351 – Canberra Airport).</p>

3 SITE ASSESSMENT

Site feature	Assessment	Limitation
Vegetation	Native grasses and weeds.	Minor
Flood potential:		
1 in 20 year	Nil	Minor
1 in 100 year	Nil	
Exposure	High	
Site aspect	West	Minor
Shelter belts	Nil	
Topographical feature or structure	Nil	
Slope	2° to 4°	Minor
Landform	Mid-slope	Minor
Run-on and seepage:		
Comment	Run-on and sub-surface seepage is expected to be low.	Minor
Erosion potential:		
Erodibility and Erosion hazard	The topsoil and subsoil have a low erodibility. Erosion hazard is low and is reduced with ground cover.	Minor
Site drainage	No visible signs of surface dampness	Minor
Fill	Nil	Minor
Groundwater:		
Level of protection	Medium	Minor
Bores and wells in the area and their purpose		

Site feature	Assessment	Limitation
	<p>No existing groundwater well within 100m of the proposed application area.</p> <p>No impact on groundwater is expected from the application of effluent on the site.</p>	
<p>Surface water:</p> <p>Permanent waters, streams, lakes <i>(Recommended buffer distance 100m)</i></p> <p>Other waters, intermittent waterways, dams <i>(Recommended buffer distance 40m)</i></p>	<p>No permanent waters, streams, or lakes within 250m of the proposed application areas.</p> <p>No drainage lines or dams within 40m of the proposed application areas.</p>	Minor
<p>Buffer distances from recommended application area to:</p> <p>Premises boundaries, paths and walkways, recreation areas <i>(Recommended buffer distance 3-4m)</i></p> <p>Swimming pools <i>(Recommended buffer distance 6m)</i></p> <p>Buildings <i>(Recommended buffer distance 3-15m)</i></p>	<p>>6m</p> <p>Nil</p> <p>>6m (Subsurface irrigation)</p> <p>>15m (Surface spray irrigation)</p>	Minor
<p>Area required for application system(s):</p> <p>Area available (including buffers):</p>	<p>Proposed primary residence: 442m² minimum area required for irrigation system.</p> <p>A potential application area greater than 900m² is available in the nominated effluent disposal areas.</p>	Minor
Surface rocks, rock outcrops	No within potential application area	Minor

Site feature	Assessment	Limitation
Geology/ regolith	The 1:100,000 Gunning Geology Map (geological series sheet 8728) indicates that the site is underlain by quaternary residual deposits of clayey, coarse-to-fine grained sand and sandy clay with sporadic ferruginous to siliceous, pebble to cobble-sized corestones.	Minor
Environmental concerns:		
Native plants intolerant of phosphorous	Nil	Minor
High water table	Nil	
Water way/wetland	None nearby	
Community water storage	None nearby	
Site stability:		
Is expert assessment necessary	No, not expected to affect system performance	Minor

4 SOIL ASSESSMENT

The soil was assessed on site on 12 April 2024. To establish the subsurface condition and soil properties, two boreholes were drilled on the site to refusal at the depths ranging from 1.3m to 1.4m using a 50mm pushtube. Borehole 1 (BH1) was drilled within the proposed application area and soil samples were collected from BH1. BH2 was drilled on the proposed reserve area.

The soil profile was described, and representative samples collected for the determination of physical and chemical properties. Soil physical property measurements undertaken included: dispersion description, texture, colour, pH, and salinity. The laboratory tests for physical properties were undertaken at our office and the results are presented in the following table.

Depth (mm)	Description	Sampled (X)	Texture group	Moisture	Emerson aggregate test*	pH (1:5 water)	ECe dS/m
BH1							
0 - 100	Dark brown loam	100	L	D	5	6.5	0.58
100 - 1400	Red-Brown light clay with gravel	700	LC	D-M	3	7.0	0.81

BH2							
0 - 100	Dark brown loam	100	L	D	5	6.2	0.60
100 - 1300	Red-Brown light clay with gravel	700	LC	D-M	3	6.3	0.74

M=Moist, D=Dry *1= highly dispersive (slakes, complete dispersion), 2= moderately dispersive (slakes, some dispersion), 3= slightly dispersive (slakes, some dispersion after remoulding), 4= non-dispersive (slakes, carbonate or gypsum present), 5= non-dispersive (slakes, dispersion in shaken suspension) 6= non-dispersive (slakes, flocculates in shaken suspension), 7= non-dispersive (no slaking, swells in water), 8= non-dispersive (no slaking, does not swell in water).

Site feature	Assessment	Limitation
Depth to bedrock	Greater than 1.4m in recommended application areas <i>(0.6m below application base recommended)</i>	Minor
Depth to high water table	Greater than 1.4m in recommended application areas <i>(0.6m below application base recommended)</i>	Minor
Coarse fragments	Gravel ~ 5%	Minor
Bulk density	Good (estimated)	Minor
pH	Satisfactory <i>(4.5-8.5 optimum range)</i>	Minor
Salinity	Non-saline <i>(<4.0 dS/m desirable threshold)</i>	Minor
Phosphorus sorption index	For the first 1m of soil, 2,900 kg/ha for 0.1m of L, 6,900 kg/ha for 0.9m of LC Weighted average = $2,900 \times 0.1 + 6,900 \times 0.9 = 6,500 \text{ kg/ha}$	Minor
Nutrient balance	Application area to be dictated by the nutrient balance.	Minor
Cation exchange capacity	Moderate (estimated). Will provide adequate retention of nutrients for plant growth.	Minor
Dispersiveness (Emerson aggregate test)	Non-dispersive loam topsoil over a slightly dispersive light clay subsoil.	Minor
Soil structure	Moderately structured	Minor
Soil texture (subsoil)	Loam (100mm); L; Category 3	Moderate
Permeability category	Light clay (> 1400mm): LC; Category 5	

5 EFFLUENT DISPOSAL SYSTEM SELECTION

Based on the site and soil assessment, an effluent system comprising of a sub-surface drip or surface spray irrigation system and a secondary treatment system (AWTS) is suitable for the site, which is consistent with the recommendations on Land Capability Assessment prepared for the sub-division.

6 EFFLUENT DISPOSAL SYSTEM DESIGN

The calculations in determining the size for the application area are outlined below. Using Table H1 in AS1547:2012 – “Disposal Systems for Effluent from Domestic Premises”, the daily flow was calculated using the assumptions outlined in Table 1.

Water Balance: $A = Q \text{ (L/day)}/\text{DIR (mm/day)}$
Where $Q = 720 \text{ L/day}$
 $\text{DIR} = 3 \text{ mm/day}$ (for light clay)
 $A = 720/3 = \mathbf{240m^2}$

Nitrogen Balance: $A = Q(\text{L/day}) \times \text{TN (mg/L)}/\text{Ln (critical loading of TN, mg/m}^2\text{/day)}$
Where $Q = 720\text{L/day}$
 $\text{TN} = 25\text{mg/L}$ (from Silver Book)

Assume 20% loss by denitrification; $25\text{mg/L} - (25 \times 0.2) = 20\text{mg/L}$
 $\text{Ln} = 15,000\text{mg/m}^2\text{/year}$ (150kg/ha/year, for introduced species)
 $A = 720 \times 20 \times 365/15,000 = \mathbf{350m^2}$

Phosphorous Balance: $A = \text{P gen}/(\text{P uptake} + \text{P sorb})$
P sorption capacity
 $\text{P sorb} = 0.65\text{kg/m}^2 \times 1/3 = 0.217\text{kg/m}^2$

P uptake for design period of 50 years
 $\text{P uptake} = 4.4\text{mg/m}^2\text{/day} \times 365 \times 50 = 0.08\text{kg/m}^2$

P generated over 50 year design period
 $\text{P gen} = 10\text{mg/l} \times 720 \times 365 \times 50 = 131.4\text{kg}$

 $A = \text{P gen}/(\text{P uptake} + \text{P sorb}) = 131.4 / (0.08 + 0.217) = \mathbf{442m^2}$

The sizing of the irrigation area should be designed to take into account the nitrogen and phosphorous balance and an area of **442m²** should be allowed for.

7 TREATMENT SYSTEM

For sub-surface drip or surface spray irrigation, the effluent must be secondary treated effluent, which can be treated in an NSW Health accredited AWTs system and should be installed as per the Plumber’s installation manual. The list of NSW Health accredited secondary treatment system can be found on <https://www.health.nsw.gov.au/environment/domesticwastewater/Pages/awts.aspx>.

The system shall have adequate capacity to treat the design flow rate (720L/day) for the proposed dwelling. The septic treatment system (AS1547) with a minimum capacity of 3,500 litres. The septic tank should be fitted with an outlet filter. The tank should be installed to comply with the local council requirements and the standard AS3500.2:2003 – “Plumbing and Drainage Part 2 Sanitary Plumbing and Drainage”, and the manufacturer’s recommendations.

The tanks should be installed so that the lid of the tank is exposed at least 100mm off the ground surface level to ensure that it is properly sealed, and no stormwater enters the tank.

8 DESIGNATED AREA

The sub-surface drip or surface spray irrigation system with a minimum application area of **442m²** is required for the proposed residence and it should be installed in accordance with the requirements of AS1547: 2012.

The area will need to be covered with at least 150mm of fertile topsoil to act as an immediate storage media for effluent applied to it, and to support the rapid growth of suitable vegetation to maximize evapo-transpiration. A list of suitable plants is provided in "The Easy Septic Guide" produced by the NSW Department of Local Government.

In the case of system failure, a reserve area is required of the same size as 442m². This is highlighted in Figure 1 and 2 attached.

A fence should be placed around the effluent disposal area if there is a risk of children, animals or vehicles coming into the area. Signage, complying with AS1319 shall be placed in at least two places at the boundary of the application area, clearly visible to property uses, with wording such as "Recycled Water – Avoid Contact – DO NOT DRINK".

The treated effluent is not suitable for vegetable gardens or areas where people can come in contact with the effluent.

The area should not be used for any purposes that compromise the effectiveness of the system or access for future maintenance purposes.

9 CLOSURE

Should you require any further information regarding this report, please do not hesitate to contact our office.

Yours faithfully,

Fortify Geotech Pty Ltd

Checklist for effective management of wastewater systems

Domestic wastewater system

DO

- Check household products for suitability of use with a septic tank.
- Conserve water, prolonged period of high-water use can lead to application area failure. For optimum operation, avoid daily and weekly surges in water flows. Spas are not recommended.
- Scrape cooking dishes and plates prior to washing to reduce solid load.
- Maintain the system with regular servicing as per the manufacturer's instructions.

DON'T

- Dispose of excessive solid material, fats, lint or large water volumes into drains.

Land application area

- Construct and maintain diversion drains around the top side of the application area to divert surface water.
- The application area should be a grassed area, which is maintained at 10-30cm height.
- The area around the perimeter can be planted with small shrubs to aid transpiration of the wastewater.
- Ensure run-off from the roof or driveway is directed away from the application area.
- Periodic application of gypsum may be necessary to maintain the absorptive capacity of the soil.
- **Don't** erect any structures or paths on the land application area.
- **Don't** graze animals on the land application area.
- **Don't** drive over the land application area.
- **Don't** plant large trees that shade the land application area thereby reducing transpiration of water.
- **Don't** let children or pets play on the land application area.
- **Don't** extract untreated groundwater for potable use.
