Date Collected: 08 October 2024

The Australian Drinking Water Guidelines (ADWG) include two types of measures:

- a **health-related guideline value**, which is the concentration or measure of a water quality characteristic that, based on present knowledge, does not result in any significant risk to the health of the consumer over a lifetime of consumption; and
- an **aesthetic guideline value**, which is the concentration or measure of a water quality characteristic that is associated with acceptability of water to the consumer; for example, appearance, taste and odour.¹

Yass Valley Council reports both Guideline measures in the interests of transparent governance.

Table 1 - Health related test results

Characteristic	Guideline Value	Units	Tested Value	Meeting health-related guideline values
Antimony	0.003	mg/L	0.0001	Yes
Arsenic	0.01	mg/L	0.001	Yes
Barium	2.00	mg/L	0.0368	Yes
Boron	4.0	mg/L	0.0082	Yes
Cadmium	0.002	mg/L	0.0001	Yes
